Petition to Deny Parking Variance to 1 New Broadway aka 300 North Broadway, Sleepy Hollow, NY

Petition summary and background	Village code requires 42 spaces be provided at this location due to Open Door's planned increase of the current building size. The current building has enough parking spaces in accordance with Village Code. Open Door purchased the building fully aware of the Village Code and the resulting requirements and decided to convert 12 parking spaces into additional medical office space. This decision left only 10 very narrow spaces on site and increases the building size from 5,000 square feet to 12,389 square feet. Open Door assumes that most of their clients will walk to the new location. Open Door's Parking study contained numerous errors: alternate side parking on New Broadway ignored, includes street parking in unrealistic locations etc. and claims that increasing pedestrian volume at their recommended crossing point of RT9/North Broadway to New Broadway from 1 pedestrian to 200 per day would not have a significant impact. Based on Open Door's Parking study and assuming that 20% more patients will drive because Open Door is moving away from its patients and accounting for the increased size of the Open Door Clinic, we can assume more than 200 cars/ day trying to find parking in the Webber park neighborhood. We are concerned about the very real negative and significant traffic and safety impact for our kids resulting from this increased traffic. Additionally, should a parking variance be granted to this location very real and significant legal challenges to the entire village are likely and would impact our village for years to come: • Previous Owners of this location were denied variances – now with fewer spaces, Open Door would receive better treatment. • Other locations petitioning for parking variances could use this location as an example. • Crossing Guard impact: Open Door would reimburse for the village to employ a crossing guard but would an accident or incident at this intersection increase village liabilities? Yes. Open Door has the financial and organizational means to provide parking in accordance with Village Code.
Action petitioned for	We, the undersigned, are concerned citizens who urge our village boards to deny any parking variance for this location.

Petition to Deny Parking Variance to 1 New Broadway aka 300 North Broadway, Sleepy Hollow, NY

Petition summary and background	Village code requires 42 spaces be provided at this location. Open Door purchased the building fully aware of those requirements and decided to convert 12 parking spaces into additional medical office space. This decision left only 10 very narrow spaces on site. Open Door assumes their clients will walk to the new location and are surprised by the number of existing patients who drive to the current location (27% per the Adler study). The Adler Parking study contains numerous errors: alternate side parking on New Broadway ignored, includes street parking in unrealistic locations and claims that increasing pedestrian volume at their recommended crossing point of RT9/North Broadway to New Broadway from 1 pedestrian to 200 per day would not have a significant impact is completely inaccurate. Arguments about other locations that do not have parking are irrelevant – this location has numerous, specific issues that do not exist in any other village or Open Door locations. Legal impacts to the entire village should a parking variance be granted to this location are many and would impact our village for years to come: • Previous Owners of this location were denied variances – now with fewer spaces, Open Door would receive better treatment. • Other locations petitioning for parking variances could use this location as an example. • Crossing Guard impact: Open Door would reimburse for the village to employ a crossing guard, would an accident or incident at this intersection increase village liabilities – yes.
Action petitioned for	We, the undersigned, are concerned citizens who urge our village boards to deny any parking variance for this location.

Comments: This clinic belong at Phelps Memorial Hospital and not in a having difficulty understanding why the Open Door should be allow in a residential neighborhood, especially in area with no parking. The clinic works in Port Chester because there is a multi-story parking lot within a short walking distance. The same goes for Mount Kisco. Additionally, both locations are commercial and not residential. There is already too much going on at this intersection without addition foot/vehicular traffic. At least once a month I almost get creamed by someone making an illegal left turn 448 and I know that I'm not the only one that this happens. The police can't get a handle on that, how will they prevent people from parking illegally on the surrounding streets. Additionally, since Phelps plan on using this as a residency program then this belongs up there. Phelps have already proven that they are not to be trusted as neighbors when they refused to reopen the path between Sleepy Hollow Manor and Kendall after the construction...

Comments: Parking and safety are real concerns and no variance should be granted for a bigger building and fewer parking spaces..

Petition to Deny Parking Variance to 1 New Broadway aka 300 North Broadway, Sleepy Hollow, NY

Petition summary and background	Village code requires 42 spaces be provided at this location due to Open Door's planned increase of the current building size. The current building has enough parking spaces in accordance with Village Code. Open Door purchased the building fully aware of the Village Code and the resulting requirements and decided to convert 12 parking spaces into additional medical office space. This decision left only 10 very narrow spaces on site and increases the building size from 5,000 square feet to 12,389 square feet. Open Door assumes that most of their clients will walk to the new location. Open Door's Parking study contained numerous errors: alternate side parking on New Broadway ignored, includes street parking in unrealistic locations etc. and claims that increasing pedestrian volume at their recommended crossing point of RT9/North Broadway to New Broadway from 1 pedestrian to 200 per day would not have a significant impact. Based on Open Door's Parking study and assuming that 20% more patients will drive because Open Door is moving away from its patients and accounting for the increased size of the Open Door Clinic, we can assume more than 200 cars/ day trying to find parking in the Webber park neighborhood. We are concerned about the very real negative and significant traffic and safety impact for our kids resulting from this increased traffic. Additionally, should a parking variance be granted to this location very real and significant legal challenges to the entire village are likely and would impact our village for years to come: • Previous Owners of this location were denied variances – now with fewer spaces, Open Door would receive better treatment. • Other locations petitioning for parking variances could use this location as an example. • Crossing Guard impact: Open Door would reimburse for the village to employ a crossing guard but would an accident or incident at this intersection increase village liabilities? Yes. Open Door has the financial and organizational means to provide parking in accordance with Village Code.
Action petitioned for	We, the undersigned, are concerned citizens who urge our village boards to deny any parking variance for this location.
